

Maven Market Sales Analytics Dashboard

Project Overview

This project is an end-to-end Business Intelligence solution built in Power BI using the Maven Market dataset. The objective was to transform raw CSV data into an interactive dashboard that provides insights into sales performance, profitability, customer behavior, product returns, and geographic trends.

Key Features

Data Preparation & Transformation

- Connected and transformed multiple CSV data sources using Power Query.
- Cleaned and validated data types.
- Created custom columns and business logic.
- Built a star schema data model with lookup and fact tables.
- Configured active and inactive relationships.

Data Modeling

- One-to-many relationships between dimension and fact tables.
- Snowflake relationship between Stores and Regions.
- Hidden foreign keys for cleaner report design.
- Optimized filter direction and relationship behavior.

DAX Measures

Created business KPIs including:

- Quantity Sold
- Quantity Returned
- Total Transactions
- Total Returns
- Return Rate
- Weekend Transactions
- Total Revenue
- Total Cost
- Total Profit
- Profit Margin
- YTD Revenue
- 60-Day Revenue

- Revenue Target
- Last Month Revenue, Profit, Transactions, and Returns

Dashboard Visualizations

- KPI Cards
- Matrix with conditional formatting
- Geographic Map
- Treemap with drill-down functionality
- Revenue Trend Analysis
- Revenue Target Gauge
- Interactive Slicers
- Bookmarks and Navigation Buttons

Business Insights

- Identified top-performing product brands by transactions and profitability.
- Analyzed return rates and customer purchasing patterns.
- Evaluated revenue trends throughout 1998.
- Explored regional and city-level sales performance.
- Created interactive bookmarks to highlight key findings.

Tools & Technologies

- Power BI Desktop
- Power Query (M)
- DAX
- Data Modeling
- CSV Data Sources

Dashboard Pages

Topline Performance

Executive summary dashboard containing:

- Revenue & Profit KPIs
- Transaction Metrics
- Geographic Analysis
- Product Brand Performance
- Revenue Trend Monitoring

Notes & Insights

Interactive storytelling page with bookmarks highlighting:

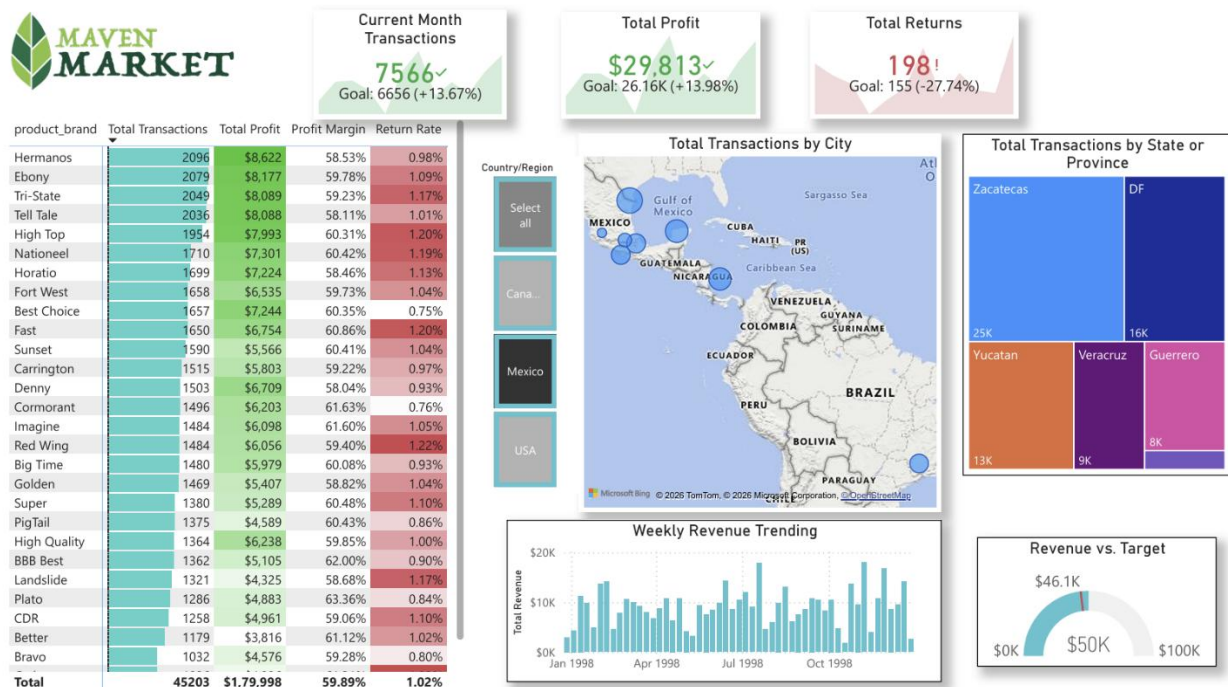

- Portland sales milestone
- Highest profit-generating brands
- Regional performance insights

Learning Outcomes

Through this project, I gained hands-on experience in:

- Data transformation and preparation
- Star schema modeling
- DAX calculations and time intelligence
- Interactive dashboard development
- Business performance analysis
- Data storytelling with bookmarks and navigation

Output:

Performance notes

- *Portland hits 9022 sales in December*
- Hermanos generated the highest total profit of \$2761.32 among all product brands, contributing significantly to overall business performance.
- The United States accounted for the largest share of transactions, outperforming Canada and Mexico.
